

## CASE STUDY 3

**Customer:** Indianapolis Spur, Westwood, Gauteng

**Industry:** Restaurant

**Region:** Gauteng, South Africa

**Energy Saving Partner:** Energyrite (Pty) Ltd

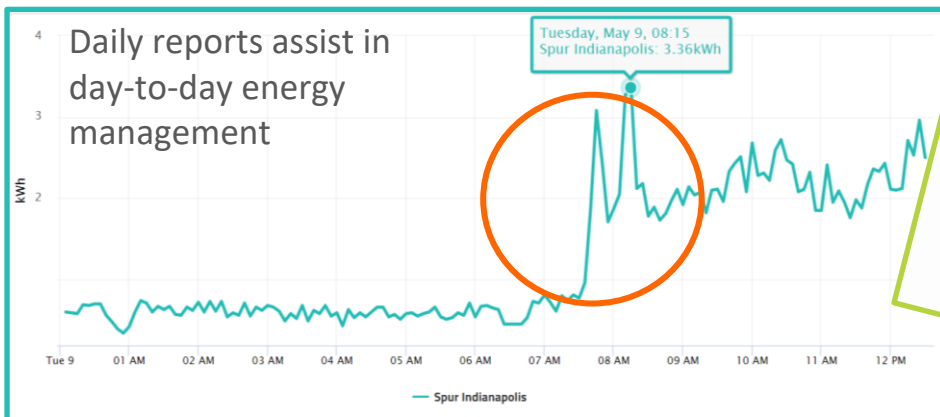

**Project Summary:** Installation of a real-time energy monitoring device, partnered with an in-depth data analytics software programme for Energyrite to monitor, identify and setup procedures to maximise savings for the Spur Store.

Mr Jassat, the Owner of Indianapolis Spur is actively involved in managing his restaurant and knows that saving electricity is key to minimizing his monthly costs. After approaching Energyrite, he was eager to see if they could uncover additional savings.

After working closely with the store's management and staff, Energyrite unearthed consistent savings through reduced consumption.

The secret? The ability to measure what you can't see. Having knowledge of real time data from specific, active appliances 24/7, gives insight into areas where the 80:20 rule applies:

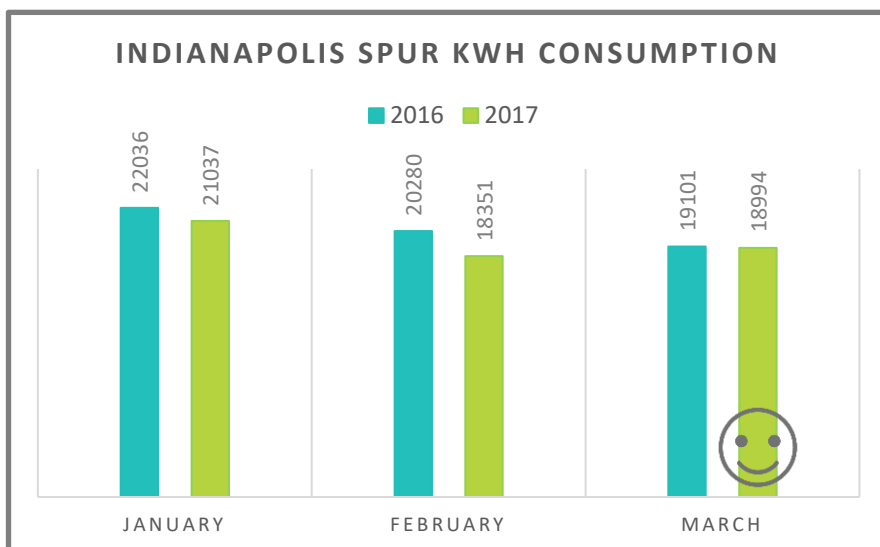

**20% of your equipment is responsible for 80% of your consumption.**

Each appliance is accurately labelled and identified in real-time, which is seen in the palm of your hand or desktop.

**"I am amazed that even with my active role in store, Energyrite are still finding ways to reduce my consumption."**

*Mohamed Jassat, Owner of Indianapolis Spur*
